In the above article there was an error in the values given in footnote 2. The correct version is published below.

The publishers would like to apologize for any inconvenience caused.

²Renne et al. [22] reported a recalculated age of 65.46 Ma for the K–T boundary but this age was based on an erroneous value of $R_{\text{FCs}}^{\text{IRZs}}$. The correct value (2.3650) yields an age of 65.58 Ma.
